

SAATH UNIVERSAL CURRICULUM PLAN

Legal Literacy • Digital Literacy • Environmental Studies • Financial Literacy

Working document for school implementation | Grades 7-9 | Low-resource classrooms

Purpose: This plan is built for the way we actually teach: large groups, mixed school settings, limited materials, and students who need practical knowledge they can use immediately.

How we are using this plan

- This document gives us one common teaching structure that we can carry into different schools without redesigning the whole curriculum every time.
- It is written for classes of around 50-70 students, so every lesson uses group-based activities, fast discussion formats, and low-cost materials.
- Each subject gets 4 hours per month. Our base model assumes 8 teaching sessions in a month, with each 2-hour session split into two 1-hour subject blocks.
- If a school gives us a full 2-hour slot for one subject, we simply combine Block 1 + Block 2 or Block 3 + Block 4 from that subject.
- This is a practical teaching plan, not a textbook. The goal is awareness, confidence, survival skills, and responsible action.

Our monthly delivery model

Base model: 8 sessions x 2 hours = 16 teaching hours per month. We teach two 1-hour subject blocks in every 2-hour session. That gives each subject 4 one-hour blocks (4 hours total) every month.

Session	Hour 1	Hour 2
Session 1	Legal Literacy - Block 1	Environmental Studies - Block 1
Session 2	Digital Literacy - Block 1	Financial Literacy - Block 1
Session 3	Legal Literacy - Block 2	Environmental Studies - Block 2
Session 4	Digital Literacy - Block 2	Financial Literacy - Block 2
Session 5	Legal Literacy - Block 3	Environmental Studies - Block 3
Session 6	Digital Literacy - Block 3	Financial Literacy - Block 3
Session 7	Legal Literacy - Block 4	Environmental Studies - Block 4
Session 8	Digital Literacy - Block 4	Financial Literacy - Block 4

If a month has only 7 sessions, we keep the same sequence and turn one session into a double block for the subject pair that missed time. We do not drop a subject.

Our standard class management method

- Before class starts, we divide 50-70 students into 8-10 mixed groups. Each group gets a number or colour.
- Each group has one speaker, one writer, and one timekeeper. Roles can rotate.
- One school teacher should always be present with us.
- We use the same attention signal in every school: raised hand + countdown from 5.
- We keep language simple and bilingual when needed. We explain new words in everyday examples.
- We never shame students for not knowing something. We invite, model, and repeat.
- We do not ask children to publicly disclose personal trauma, abuse, family debt, or private problems.

Common material kit

- Chart paper or old newspaper sheets

- Sketch pens / chalk / board markers
- Small slips of paper
- A4 worksheets if printing is possible
- Masking tape
- One whistle or clap signal only if school allows
- A notebook for attendance, observations, and follow-up points

Important safety note: If any child shares that they are currently unsafe, being abused, being forced into labour or marriage, or facing serious cyber or family harm, we do not handle it alone. We immediately inform the school authority present and follow the school's child protection process.

1. LEGAL LITERACY

Our legal literacy module is meant to give students survival-level awareness of Indian law in a way they can actually use. The focus is not courtroom theory. The focus is safety, rights, help-seeking, dignity, and everyday legal awareness.

Who this is for	Grades 7-9 works in mixed-ability classrooms
Total time each month	4 hours per month per subject
Best pairing in our timetable	Pairs well with Environmental Studies in our monthly timetable because both are discussion-heavy and do not require devices.
Core materials	board, paper slips, chart paper, tape, scenario cards, marker pens

By the end of the month, students should be able to:

- name basic rights that matter in daily student life: dignity, equality, education, safety, and protection from abuse and exploitation
- identify unsafe, unfair, or illegal situations such as child labour, child marriage, sexual abuse, bullying, blackmail, and violence
- name at least three trusted help routes: school authority, police/emergency systems, and child support helplines
- understand simple action steps: speak, document, seek help, do not hide serious harm, and do not sign or share things blindly
- respond more confidently to common legal/safety situations through scenario practice

Our legal teaching boundary: In four hours we cannot teach all of Indian law. What we can do is teach the most useful and protective basics that help children stay informed, alert, and safer in real life.

Block 1 - Me, my identity, and my rights

Aim: Students understand that law is not only punishment; it also protects people. They leave with a basic language of rights and dignity.

Key ideas we will teach

- What law means in daily life: rules that protect people, solve disputes, and keep order.
- Every child matters equally. We introduce the ideas of equality, dignity, and non-discrimination in very simple language.
- Students have a right to education and should not be pushed out of school just because of poverty or background.
- Identity matters: name, age, school identity, home address, and parent/guardian contact are basic pieces of information students should know.
- Students should know that no one has the right to insult, humiliate, or deny them basic dignity.

Main activity

Rights Circle Activity: We place 5 large chart papers in different corners - Education, Safety, Equality, Dignity, and Help. Groups rotate, write what each right means in ordinary life, and give one real example from school or home life.

Block flow

Time	Step	What we will do
0-10 min	Hook	Ask: 'What comes to your mind when you hear the word law?' Write quick responses on the board and separate punishment ideas from protection ideas.
10-20 min	Teach	Explain law in everyday terms. Introduce rights as protections that help us live with dignity and fairness.
20-35 min	Group activity	Run the Rights Circle. Each group adds examples to every chart and chooses one spokesperson.
35-45 min	Share back	Group spokespersons share. We correct gently and connect examples back to rights.
45-55 min	Mini practice	Students fill a quick identity card: full name, age/class, one trusted adult, one emergency contact, school name.
55-60 min	Close	Students say one right they remember and one sentence on why it matters.

Facilitator note: Keep this block hopeful, not scary. The purpose is to build vocabulary and confidence first.

Quick end check

- Name one right connected to school life.
- Name one trusted adult you can approach if something serious happens.

Block 2 - Protection laws children should know

Aim: Students learn the most important protection-based legal basics relevant to their age and life situation.

Key ideas we will teach

- Children must be protected from sexual abuse, sexual harassment, and sexual exploitation. Unsafe touch, coercion, threats, and sexual blackmail are never the child's fault.
- Child marriage is illegal. A child should not be pressured into marriage.
- Children should not be made to work in place of schooling or be pushed into dangerous or exploitative work.
- Violence, intimidation, and serious bullying are not 'normal' just because they happen often.
- Keeping dangerous secrets is not bravery. Serious harm must be told to a trusted adult.

Main activity

Red Flag / Green Flag Game: We read short scenarios. Groups hold up GREEN if the situation is safe/okay, RED if the situation is unsafe or illegal, and then explain why.

Block flow

Time	Step	What we will do
0-10 min	Warm-up	Quick revision: rights from Block 1. Ask what makes a situation unsafe.
10-25 min	Teach	Introduce child protection in clear, non-graphic language: abuse, coercion, child marriage, labour, violence, threats.
25-40 min	Scenario game	Run Red Flag / Green Flag with 8-10 short situations.
40-50 min	Discussion	For each red-flag scenario, ask: Who can help? What should the student do first?
50-57 min	Help map	As a whole class, create a 'do not keep it alone' help ladder: teacher, parent/guardian, counsellor, helpline, police.
57-60 min	Close	Repeat the line: 'If I am unsafe, it is not my fault, and I can ask for help.'

Facilitator note: Do not ask children to narrate personal abuse. Use neutral fictional scenarios only.

Quick end check

- Circle which is illegal/unsafe in a mini slip: child marriage / forced work / private blackmail / all of these.
- Write one sentence: If a friend is unsafe, I should...

Block 3 - Help systems, complaints, and what to do in real situations

Aim: Students understand where help comes from and what practical steps they can take during a problem.

Key ideas we will teach

- A problem becomes easier to solve when we stay calm, tell the right adult, and remember important details.
- Useful basics: save evidence if safe, remember names/places/dates, and do not delete proof in cyber matters.
- Emergency and support routes matter: trusted school authority, police/emergency systems, child support helplines, cyber complaint systems.
- Legal help is not only for 'big people'. Children also have help systems.
- Never sign forms, papers, or statements blindly if you do not understand them.

Main activity

Help Route Role-Play: Each group gets one situation card - harassment on the way to school, online blackmail, forced work, threat at home, lost documents, or bullying. The group must act out the first three correct steps.

Block flow

Time	Step	What we will do
0-10 min	Starter	Ask: 'When something serious happens, what is the first mistake people make?' Lead to panic, silence, and deleting proof.
10-20 min	Teach	Explain the practical response formula: Stay calm - Move to safety - Tell the right person - Save proof if safe - Ask for help.
20-40 min	Role-play	Groups prepare and perform help-route role-plays.
40-50 min	Board summary	Create one class board: Who helps in school? Who helps outside school? What numbers matter?
50-57 min	Mini drill	Students practise saying a clear complaint sentence: what happened, where, when, who was involved.
57-60 min	Close	Repeat help numbers and systems together.

Facilitator note: Teach clarity over fear. The goal is not to make students panic about law, but to make them feel less helpless.

Quick end check

- Students write one correct first step for an online threat.
- Students name one school-based and one outside-school help route.

Block 4 - Legal confidence lab and monthly consolidation

Aim: Students revise the month through applied tasks so that the learning stays usable and not just theoretical.

Key ideas we will teach

- Rights are meaningful only when we can recognise when they are being denied.
- A student can be respectful and still say no to unsafe pressure.
- Speaking up early can prevent bigger harm later.
- The safest students are not the most fearful students; they are the most aware and prepared students.

Main activity

Legal Survival Stations: Four stations - Rights Match, Unsafe Situation Sort, Help Route Match, and Complaint Sentence Practice. Groups rotate every 8-10 minutes.

Block flow

Time	Step	What we will do
0-8 min	Recap	Fast board recap of the month: rights, protection, help systems, response steps.
8-45 min	Station rotation	Run four legal stations with

Time	Step	What we will do
		group score sheets.
45-53 min	Class debrief	Review common mistakes and correct them.
53-58 min	Pledge	Class repeats a short legal awareness pledge: 'I will respect others, protect myself, and ask for help when needed.'
58-60 min	Close	Collect score sheets and note which concepts need reinforcement next month.

Facilitator note: This block should feel active, fast, and empowering. It is our monthly reinforcement block.

Quick end check

- One rights question
- One unsafe/illegal situation question
- One help-route question

2. DIGITAL LITERACY

Our digital literacy module is built for students who are already living around phones, apps, forwarding culture, online videos, and digital fraud. The aim is not only technical skill. The aim is safe, alert, and responsible use.

Who this is for	Grades 7-9 works in mixed-ability classrooms
Total time each month	4 hours per month per subject
Best pairing in our timetable	Pairs well with Financial Literacy because scam safety, fraud prevention, and practical decision-making overlap.
Core materials	board, slips, printed fake messages/screenshots, scenario cards

By the end of the month, students should be able to:

- understand basic digital footprint, privacy, password, and OTP safety
- spot common online risks such as fake links, scam messages, impersonation, and blackmail
- respond better to cyberbullying, unwanted contact, and harmful content
- check information before believing or forwarding it
- know the basic reporting path for cyber harm and online fraud

Why this matters for our schools: Many students may not own a phone personally, but they still live in a digital environment through family phones, shared devices, gaming shops, cyber cafés, WhatsApp groups, and social media exposure. Digital literacy is still necessary.

Block 1 - The internet around us: devices, apps, and digital footprints

Aim: Students understand that online actions leave traces and that the internet is not a consequence-free space.

Key ideas we will teach

- What counts as digital use: phones, shared devices, school computers, public Wi-Fi, YouTube, WhatsApp, games, search, social media.
- Digital footprint means the traces we leave through messages, likes, uploads, searches, and screenshots.
- What we post or forward can travel beyond our control.
- A private chat can become public if someone screenshots it.
- Not every digital space is safe just because it is popular.

Main activity

Digital Footprint String Game: One volunteer starts with a paper 'message'. It is passed to 8-10 people, then we ask: can we control where it went? This leads into the idea of screenshots, forwards, and digital traces.

Block flow

Time	Step	What we will do
0-8 min	Hook	Ask students where they meet the internet in real life, even if the

Time	Step	What we will do
		device is not theirs.
8-18 min	Teach	Explain digital footprint using local examples: profile photo, forwards, comments, saved images, screenshots.
18-30 min	Demonstration	Run the Footprint String Game.
30-42 min	Discussion	Ask what should never be posted or forwarded without thinking.
42-55 min	Group task	Groups create two lists: 'safe to share' and 'not safe to share'.
55-60 min	Close	Each group gives one digital rule they want to remember.

Facilitator note: Keep examples real: photos, OTPs, school rumours, prank accounts, fake offers, screenshots.

Quick end check

- Define digital footprint in one sentence.
- Write one thing that should not be shared without thought.

Block 2 - Passwords, OTPs, scams, and fraud prevention

Aim: Students learn the most important digital self-protection habits.

Key ideas we will teach

- A strong password should not be obvious, reusable everywhere, or shared with friends.
- OTP, PIN, passwords, and bank details are private. They should not be given to callers, friends, or random links.
- Scams often use urgency, fear, prizes, or fake authority.
- Fake links and fake customer care messages are common traps.
- The safest habit is to pause, verify, and ask before clicking or sending.

Main activity

Scam Detective: We show groups 6-8 fake messages/call scripts. Each group marks what makes it suspicious: urgency, spelling, money promise, OTP request, unknown link, fake number, or fear tactic.

Block flow

Time	Step	What we will do
0-10 min	Warm-up	Quick ask: who has heard 'never share OTP'? Why?
10-20 min	Teach	Explain password basics, OTPs, fake links, fake reward messages, and impersonation.
20-38 min	Scam detective	Groups analyse message cards and mark red flags.
38-48 min	Demonstration	Facilitator performs a fake scam call. Students interrupt and identify warning signs.
48-56 min	Protection rules	Build a class list: pause, verify, ask, do not click, do not pay, do

Time	Step	What we will do
		not share.
56-60 min	Close	Students repeat the line: 'No OTP, PIN, or password sharing. Ever.'

Facilitator note: Link this block to financial safety. Many students have family members who could be targeted.

Quick end check

- Circle all secrets that must never be shared: OTP / PIN / password / all three.
- Write one sign that a message may be fake.

Block 3 - Cyberbullying, consent, online behaviour, and misinformation

Aim: Students understand that being online also means being responsible, respectful, and careful with truth.

Key ideas we will teach

- Cyberbullying includes threats, insults, humiliation, spreading rumours, fake accounts, and posting private content without permission.
- Consent matters online. We do not share someone else's photo, chat, or number without permission.
- Forwarding harmful content still causes harm even if we did not create it.
- Not everything online is true. Fake news spreads fast when people forward without checking.
- Strong digital citizens do not become part of online harm.

Main activity

Forward or Stop? Groups receive mixed items - a helpful school notice, a scary rumour, a morphed image, a joke screenshot, a fake health message. They decide: forward, check first, or stop completely.

Block flow

Time	Step	What we will do
0-10 min	Starter	Ask: 'Is forwarding something the same as creating it?' Use answers to open discussion.
10-22 min	Teach	Explain cyberbullying, consent, and misinformation in plain language.
22-38 min	Sorting activity	Run Forward or Stop? with group discussion.
38-48 min	Mini debate	Is 'just joking' okay if someone is humiliated? Discuss.
48-55 min	Class code	Create a 5-line Saath Digital Code for respectful online behaviour.
55-60 min	Close	Students sign or repeat the digital code.

Facilitator note: Keep the tone firm but not preachy. Students respond better when we treat them as capable decision-makers.

Quick end check

- Write one example of cyberbullying.
- Write one thing you should check before forwarding a message.

Block 4 - What to do when something goes wrong online

Aim: Students practise response steps for digital harm instead of freezing or panicking.

Key ideas we will teach

- First response matters: stop replying, save proof, block, report, and tell the right adult.
- Screenshots, chat history, transaction details, and numbers can be useful evidence.
- Online harm should not be hidden out of shame.
- There are formal reporting paths for cybercrime and online fraud.
- Responsible digital use means protecting yourself and others.

Main activity

Response Drill Stations: Groups rotate through 4 situations - fake prize message, bullying in class group, unknown person asking for photos, and payment fraud. At each station they write the correct response steps in order.

Block flow

Time	Step	What we will do
0-10 min	Teach	Explain response formula: stop - save proof - block/report - tell a trusted adult - use official help if needed.
10-35 min	Station drill	Groups complete response sheets at four stations.
35-45 min	Review	Correct the order of steps together.
45-53 min	Reporting map	Write the cyber help path on the board: teacher/parent - cyber helpline - reporting portal - police if needed.
53-58 min	Confidence round	Students practise saying: 'I have proof. I need help. This happened online.'
58-60 min	Close	Quick oral quiz on safe response.

Facilitator note: Students must leave this block with action steps, not only warnings.

Quick end check

- Name the first two steps after receiving a scam or threat online.
- Name one official cyber help route.

3. ENVIRONMENTAL STUDIES

Our environmental studies module is designed to move students from awareness to everyday action. We are not teaching abstract climate talk only. We are teaching habits, local responsibility, and the idea that protecting the environment begins where we live, study, travel, and consume.

Who this is for	Grades 7-9 works in mixed-ability classrooms
Total time each month	4 hours per month per subject
Best pairing in our timetable	Pairs well with Legal Literacy because both build citizenship and responsibility through discussion and action.
Core materials	waste picture cards, chart paper, observation sheets, tape, chalk, old newspapers

By the end of the month, students should be able to:

- understand the link between everyday life and environmental impact
- practise simple environmentally responsible habits related to waste, water, sanitation, and energy
- see environmental care as both a local and global responsibility
- observe their own school and neighbourhood more critically
- complete one small action task as a group by the end of the month

Our environmental principle: Students do not become environmentally responsible because we gave them facts once. They become responsible when we connect the topic to daily behaviour, local observation, and repeated action.

Block 1 - Me, my surroundings, and why environment is personal

Aim: Students connect environment to daily life rather than seeing it as a distant chapter.

Key ideas we will teach

- Environment is not only forests and wildlife. It includes the air, water, soil, trees, streets, drains, waste, and public spaces around us.
- What we throw, burn, waste, or ignore affects our own health and neighbourhood first.
- Environmental responsibility starts with observation: what is happening around our school and homes?
- Being a good citizen includes caring for shared spaces.

Main activity

School and Neighbourhood Mapping: Groups draw a rough map of the school or nearby area and mark green spaces, waste spots, water points, dirty areas, and areas that need improvement.

Block flow

Time	Step	What we will do
0-10 min	Hook	Ask: 'Where does the environment begin?' Push answers beyond 'nature' toward our own surroundings.

Time	Step	What we will do
10-20 min	Teach	Explain environment as daily life systems: water, air, soil, waste, common spaces.
20-38 min	Group activity	Groups create simple environment maps.
38-48 min	Gallery walk	Maps are displayed. Students walk around and compare.
48-56 min	Debrief	Discuss patterns: where is waste? where is water wasted? where does smoke/dust come from?
56-60 min	Close	Each group chooses one problem they want to reduce.

Facilitator note: Use the school's real environment. That makes the subject feel immediate and serious.

Quick end check

- Write one environmental issue you can see near school or home.
- Write one way the environment affects health.

Block 2 - Waste, plastic, cleanliness, and responsible disposal

Aim: Students learn practical waste responsibility and see waste as a behaviour issue, not just a government problem.

Key ideas we will teach

- All waste is not the same. Wet waste, dry waste, sanitary waste, and e-waste should not be mixed thoughtlessly.
- Single-use plastic creates long-term harm even when it feels convenient in the moment.
- Open dumping and burning create health and environmental problems.
- Cleanliness is not only about appearance. It affects disease, dignity, and shared responsibility.

Main activity

Waste Sorting Relay: Groups race to sort picture cards or actual clean sample items into wet, dry, reject/sanitary, and e-waste. Then we discuss mistakes.

Block flow

Time	Step	What we will do
0-8 min	Starter	Ask students what usually happens to waste after it leaves the hand.
8-18 min	Teach	Explain basic categories of waste and why mixing waste is a problem.
18-35 min	Relay	Run the Waste Sorting Relay.
35-45 min	Correct and discuss	Review sorting errors. Introduce plastic reduction habits.
45-55 min	Micro-action plan	Groups write three things the class can change this week.
55-60 min	Close	Vote on one class waste action.

Facilitator note: Do not overcomplicate categories. Keep the system simple enough to be remembered.

Quick end check

- Name two categories of waste.
- Name one thing you can refuse or reduce.

Block 3 - Water, energy, air, and climate responsibility

Aim: Students learn that conservation is not moral talk only; it is a daily practical habit.

Key ideas we will teach

- Water is limited and easily wasted through leaking taps, careless washing, and poor habits.
- Energy saving also matters: fans, lights, charging, and appliance use all have an environmental cost.
- Air pollution can come from traffic, burning waste, smoke, dust, and other local sources.
- Climate change is global, but many useful responses are local habits and community choices.

Main activity

Resource Audit Walk: Students do a guided observation around the school (or imagine it on paper if movement is not allowed) and record where water, energy, and cleanliness are being wasted.

Block flow

Time	Step	What we will do
0-10 min	Hook	Ask what gets wasted more easily in daily life: water, time, or electricity. Use answers to begin.
10-22 min	Teach	Explain water saving, energy saving, and local pollution in a practical way.
22-38 min	Audit walk / paper audit	Groups observe or map resource waste.
38-48 min	Discussion	Groups share the three biggest waste points they found.
48-56 min	Action board	Write one realistic change for each: water, energy, air/cleanliness.
56-60 min	Close	Students choose one habit they will start this week.

Facilitator note: Keep this block grounded. The point is action students can actually take.

Quick end check

- Write one water-saving habit.
- Write one energy-saving habit.

Block 4 - Global citizenship, local action, and monthly consolidation

Aim: Students understand that environmental citizenship means sustained small actions, not only slogans.

Key ideas we will teach

- A global citizen understands that local choices connect to larger environmental problems and solutions.
- Helping the Earth is not only a government or adult responsibility.
- Small actions repeated by many people matter.
- The strongest environmental learning ends in one visible action.

Main activity

Saath Eco Campaign: Each group designs one tiny campaign product for the school - slogan card, wall poster, 5-point class pledge, water monitor plan, or waste reminder system. Groups present and one or two ideas are selected for real use.

Block flow

Time	Step	What we will do
0-10 min	Recap	Quick recap of the month: environment map, waste, water, energy, action.
10-30 min	Campaign design	Groups make one eco-action product.
30-45 min	Presentations	Groups present their campaign idea in 1 minute.
45-53 min	Selection	Class and teacher pick one or two ideas that can actually continue.
53-58 min	Pledge	Students take a short environment pledge.
58-60 min	Close	Record selected actions for follow-up next month.

Facilitator note: This block should leave something behind in the school - not just memory, but a small action system.

Quick end check

- Name one action your class can continue after we leave.
- Explain what makes someone an environmentally responsible citizen.

4. FINANCIAL LITERACY

Our financial literacy module is built to help students make better everyday choices with money. The focus is practical: spending, saving, basic bank awareness, planning, and scam prevention.

Who this is for	Grades 7-9 works in mixed-ability classrooms
Total time each month	4 hours per month per subject
Best pairing in our timetable	Pairs well with Digital Literacy because money safety and scam safety are closely linked.
Core materials	play money or number cards, worksheets, fake bank form, situation cards

By the end of the month, students should be able to:

- differentiate clearly between needs and wants
- plan simple spending and saving decisions
- understand why savings, goals, and emergency funds matter
- know the basics of banks and safe money handling
- spot common money scams and risky promises

Base used for this subject: This financial module keeps the strongest parts of our existing financial literacy plan and organises them into the same 4-hour monthly structure as the other three subjects.

Block 1 - Money, income, and needs vs wants

Aim: Students understand what money is for and how spending choices begin.

Key ideas we will teach

- Money comes through work, labour, business, services, or family earnings.
- Needs are the things required for living and learning well. Wants are things we may enjoy but can delay or avoid.
- Good money habits begin with choosing needs first.
- Every spending choice has a consequence.

Main activity

₹100 Challenge: Groups are told they have ₹100. They must decide how to spend it. Then we discuss what they chose, what was need vs want, and what they would change.

Block flow

Time	Step	What we will do
0-10 min	Hook	Ask: 'If you got ₹100 today, what would you do first?'
10-20 min	Teach	Explain sources of income and needs vs wants.
20-35 min	Main activity	Run the ₹100 Challenge.
35-45 min	Board sort	Create two columns: needs and wants. Groups place their spending items.
45-55 min	Reflection	Discuss what smart spending

Time	Step	What we will do
		looks like in real life.
55-60 min	Close	Students write one need and one want on a slip.

Facilitator note: This block should feel lively and personal. Let students talk through real choices.

Quick end check

- Define need and want with one example each.

Block 2 - Budgeting and stopping overspending

Aim: Students practise simple money planning.

Key ideas we will teach

- A budget is a plan for money before it gets spent.
- A simple budget can divide money into spending, saving, and emergency use.
- Overspending usually happens when we buy fast, buy to impress, or buy without a plan.
- A pause before buying is a protective habit.

Main activity

Budget Relay: Each group gets ₹100 and three categories - spending, saving, emergency. They must decide an allocation and justify it.

Block flow

Time	Step	What we will do
0-8 min	Starter	Ask what happens when we spend first and think later.
8-18 min	Teach	Explain basic budgeting and overspending in simple language.
18-35 min	Relay	Run the Budget Relay with group justifications.
35-45 min	Review	Compare group budgets and discuss which are balanced.
45-55 min	Personal question	Students answer: 'Before buying, what two questions should I ask?'
55-60 min	Close	Repeat the class rule: plan first, spend second.

Facilitator note: Use small numbers and real categories so students can picture the decisions.

Quick end check

- Write one simple budgeting rule.
- Write one way to prevent overspending.

Block 3 - Saving, goals, emergency funds, and banks

Aim: Students learn how money grows safer and more useful when it is planned.

Key ideas we will teach

- Saving means keeping some money for future use instead of using all of it immediately.
- Goals can be short-term or long-term.

- An emergency fund helps when something unexpected happens.
- Banks keep money safer than keeping it loosely at home and help build discipline.
- Basic bank words: deposit, withdraw, savings account.

Main activity

Would You Rather? + Fake Bank Form: We ask where students would keep money in different situations, then groups fill a simple mock savings form to become familiar with the basic information asked by institutions.

Block flow

Time	Step	What we will do
0-10 min	Warm-up	Ask: 'Why do people save if they have needs right now?'
10-22 min	Teach	Explain saving, goals, emergency funds, and bank basics.
22-35 min	Would You Rather?	Run the choice game: home / friend / bank / secret place, and discuss.
35-50 min	Mock form	Students complete a fake bank form in groups.
50-57 min	Review	Explain deposit, withdraw, account, and safety.
57-60 min	Close	Students name one reason to save.

Facilitator note: Keep the bank section basic and confidence-building. Avoid jargon overload.

Quick end check

- Define saving.
- Define emergency fund.

Block 4 - Risk, scams, and safe money behaviour

Aim: Students finish the month with protection-based money habits.

Key ideas we will teach

- If something promises easy money or huge profit very fast, it may be a trap.
- Money scams often ask for private details, OTPs, or quick action.
- Low risk usually means safer but slower growth. High risk can bring bigger gain or bigger loss.
- Students should not be pressured into money decisions they do not understand.
- Safe money behaviour includes asking questions, verifying, and refusing suspicious offers.

Main activity

Scam Spotter: Groups examine fake prize offers, double-money claims, OTP requests, and fake loan/help messages. They identify the warning signs and write the safe response.

Block flow

Time	Step	What we will do
0-10 min	Teach	Explain low risk/high risk in simple terms and connect it to

Time	Step	What we will do
		safety.
10-28 min	Scam spotter	Groups analyse fake messages/offers.
28-40 min	Discuss	Review why people fall for scams: greed, urgency, fear, trust.
40-52 min	Safety rules	Class creates a 5-rule money safety poster.
52-58 min	Recap	Quick oral recap of the month.
58-60 min	Close	Students repeat one scam-prevention rule.

Facilitator note: This block should connect tightly with Digital Literacy so students understand that many money scams happen through phones and messages.

Quick end check

- Write one sign that an offer may be a scam.
- Write one thing you should never share.

Implementation planning across schools

This section is our working system for using the same curriculum in different schools without losing quality.

Before entering any school

- Confirm class, student strength, room, board, and whether movement is allowed for activities.
- Ask the school if students will sit in fixed benches or if group circles are possible.
- Carry scenario cards and all printed material in advance; do not depend on last-minute printing.
- Assign one lead facilitator, one co-facilitator, one activity manager, and one documentation person.
- Decide in advance which 1-hour block will be taught that day. Never improvise the subject order on the spot.

Suggested facilitator deployment for 50-70 students

Role	What the person handles
Lead facilitator	Teaching, transitions, final recap, behaviour tone
Co-facilitator	Board work, examples, clarifying student questions
Activity manager	Group formation, distributing materials, keeping pace
Documentation person	Attendance, quick notes, photos only if permission exists, feedback collection

How we will keep activities manageable

- No activity should require every child to speak publicly. Group work is faster and safer.
- Every activity must end with one written or verbal output.
- We use one board summary after each activity so the class leaves with clarity, not just energy.
- We keep paper-based activities short. Long writing tasks slow down big groups.
- If noise rises too much, we switch to spokesperson-only sharing.

What we will track every month

- Attendance count
- Which blocks were completed
- Which activity worked best
- Which concept students struggled with
- Three strong student responses or observations
- Follow-up action needed with school

Monthly review questions for our team

- Which subject held attention best and why?
- Which activity needs simplification?
- Did students understand the main safety message in legal and digital literacy?

- Did environmental learning end in a visible action?
- Did financial literacy stay practical and relatable?
- What should we repeat next month because it was especially useful?

Appendix A - Quick activity bank

These are the activities we can repeat in different schools without changing our whole lesson design.

Legal Literacy

- Rights Circle
- Red Flag / Green Flag
- Help Route Role-Play
- Legal Survival Stations

Digital Literacy

- Digital Footprint String Game
- Scam Detective
- Forward or Stop?
- Response Drill Stations

Environmental Studies

- School and Neighbourhood Mapping
- Waste Sorting Relay
- Resource Audit Walk
- Saath Eco Campaign

Financial Literacy

- ₹100 Challenge
- Budget Relay
- Would You Rather?
- Scam Spotter

Appendix B - Useful student safety numbers and support routes

- School first: class teacher / trusted teacher / principal or school authority present
- Police emergency: 112
- Child support helpline: 1098
- National Cyber Crime Helpline: 1930
- Cyber complaint portal can be used for online fraud and cyber abuse reporting through the official national cybercrime system

Appendix C - One-line promises we will repeat with students

- I do not have to stay silent when something is unsafe.
- I will not forward harm, rumours, or private content.
- I will treat water, energy, and public spaces responsibly.
- I will think before I spend and save when I can.
- I will ask for help early, not after things become worse.
